Appendix 3: Final interview after 1 Week of Software use

Me: Hey, how has your experience been with the program this past week?

Brian: It's been good. It has some well made functions but I also have some recommendations that you could add.

Me: Alright, i'm interested to hear what you think about the different modules

Brian: So the Login page was working as expected and I could login with the different accounts from the user page that I could create as an Admin.

Me: That's good, what did you think about the GUI?

Brian: The interface was very good, I like the way it looks but not only that it's quite intuitive and easy to use. I could navigate the entire program without effort. Also it made it very easy to add data which saved me a lot of time with inputting products.

Me: And did everything go accordingly with regards to the database?

Brian: Yea all the data was stored on the database and I could see it displayed onto the program table.

Me: Okay and how about the other modules such as the sale or automatic restocking and pdf makers?

Brian: Yes I did engage in a few sales with my employees and This feature is really useful as it does all the calculations in the background and I enjoyed how practical the customer feature is because it automatically adds the customer sale information. The PDF was also well made and displayed the required information that we need on a daily basis. Lastly the restocking feature worked accordingly as the quantity would decrease automatically and the email to be automatically sent to the supplier definitely saved me a lot of time instead of having to compile all the products that need to be restocked.

Me: That's great, lastly did all the input boxes validate correctly?

Brian: Yea, all the inputs were validated.

Me: So what recommendations did you have for me?

Brian: Well I think that because some of the products I receive do not come pre attached with a barcode. It is difficult to scan with my barcode scanner and input into the program, so I think that it would be a good idea to make some kind of barcode creator where I could manually enter the code of a product and then the program would generate a barcode for the product.

Me: Ok i'll take that into consideration, In the meantime thanks for the feedback and for being my client.

Brian: Sure, no problem.
